

SAFEHIVE

DUST CONTAINMENT TENT

+ Why Hire SafeHIVE?

SafeHIVE Dust Containment Tents are an inflatable & easily re-locatable self-contained workspace with the concept of minimising the spread of respirable dust produced from cutting processes throughout construction projects.

+ Adaptable

Floor of the SafeHIVE Dust Containment Tent can be easily removed for works being undertaken to the ground. If you need a bigger space, the SafeHIVE has the major advantage of being easily extendable with the connection of additional SafeHIVE Tents. Each SafeHIVE is 3m(W)x3m(L)x2.3(H)

+ Practical

SafeHIVE Dust Containment Tents incorporate clear panels allowing natural light to enter which is in addition to internal fixings at high level for cables / festoon lighting, thus keeping items with the potential to cause trip hazards off the floor.

SafeHIVE Dust Containment Tents stop the migration of dust leaving the tent, as well as preventing dust outside from entering – making it ideal for use as a site welfare unit or offices.

LONG-TERM HIRE RATES**

+ Effective

SafeHIVE Dust Containment Tents have been developed to enable the recirculation of filtered clean air, with outlet / inlet ports incorporated in various areas of the Hive. Thus, helping to reduce the incidences of construction related lung conditions.

SEE IT IN ACTION

SAFEHIVE

DUST CONTAINMENT TENT

Made with heavy duty, construction proof material which is also fire retardant.

Easily big enough to house all the equipment you'll need to setup your cutting room.

Built in ports to directly connect a Dustcontrol H-Class Air scrubber to maintain a dust free working environment!

Easy to setup and inflates in approximately 3 minutes with the provided pump. Includes Sandbags to anchor the SafeHIVE in place

Packs up to a compact size to allow easy relocation and transport!
